

rubber flooring

the quality that lasts as time goes by

company

INDELVAL: QUALITY, DURABILITY AND MODERN DESIGNS IN RUBBER FLOORING.

Indelval has been exclusively dedicated to the manufacture of high-quality rubber flooring for more than 30 years, accompanying and challenging the tendencies of modern architecture.

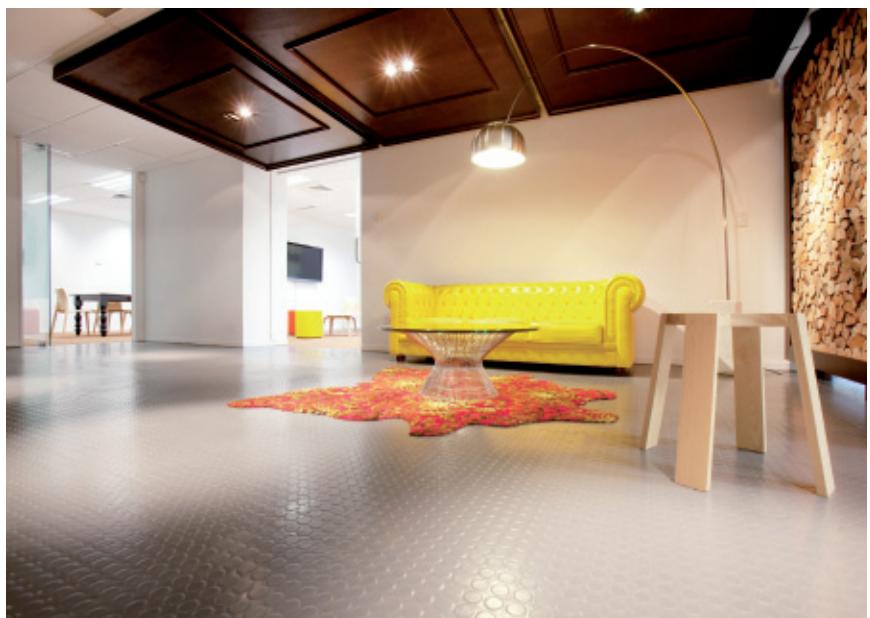

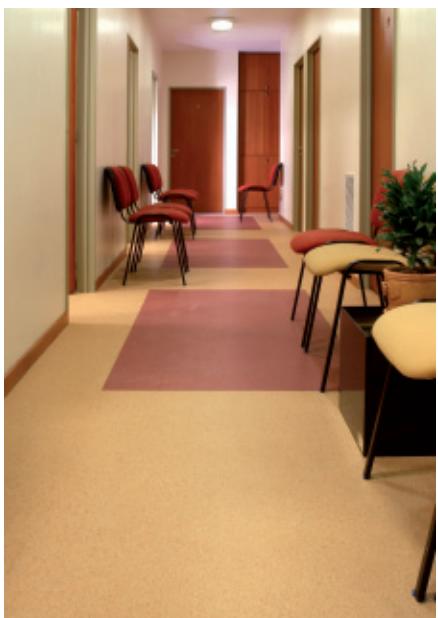

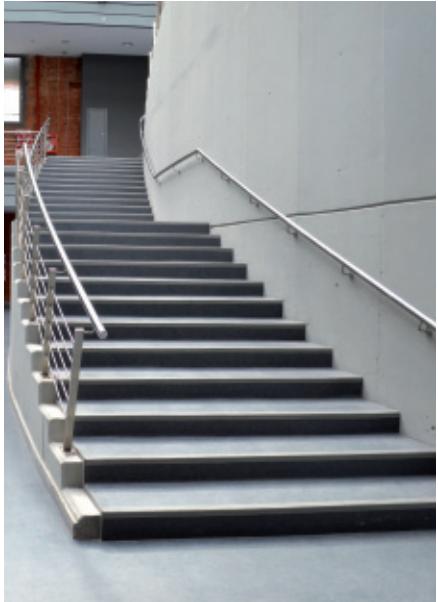

Constant commitment to the development of improved products has resulted in Indelval being acceptance around the world.

Indelval rubber floorings are manufactured with the highest quality and their extreme wear resistance make them ideal in the most demanding environments.

Decades of experience in close collaboration with building professionals and facility managers have turned Indelval into one of the most prestigious and innovative rubber flooring manufacturers in the world.

The development of a high pressure system for rolls and tiles, along with its modern facilities, allows Indelval to have an incomparable flexibility and quick response.

Indelval offers a wide range of flooring solutions for many environments such as healthcare, education, office, retail, multi-purpose halls and transport (bus, train, vans).

rubber soul

HIGH QUALITY RAW MATERIAL

Rubber is a raw material used for many products that require outstanding performance. Car tires, industrial seams, medical supplies and even baby bottles are based on rubber. It makes the difference in products with very demanding requirements.

Main compounds used to produce Indelval rubber flooring are natural rubber, a rapidly renewable material extracted from the sap of tropical trees, high quality synthetic rubber, mineral fillers and eco-compatible color pigments from natural sources.

Natural rubber is extracted manually by cutting the bark of rubber tropical tree. This white latex sap is a polymer with elastic properties. This is an essential part of the mix of high quality rubber. Main supply sources are located in Southeast Asia.

Industrial, or synthetic rubber, is also used. These are manufactured through polymerization of refined oil products. This method allows the production of rubber with very specific properties for industrial applications.

The mix of these two types of rubber, combined with mineral fillers from natural sources and other components, results in special compounds for specific applications, including Indelval rubber flooring.

The critical process to transform this mix of rubber is called vulcanization. This process, under controlled conditions of high pressure, time and temperature, is an integral part of the process that transforms the rubber into sheet and tile flooring resulting in high durability and elasticity.

sustainability

Sustainability and environmental care are not just words. They are a fundamental part of the Indelval corporate culture, transformed into actions day after day. Our most important material is natural rubber, a rapidly renewable resource from the sap of the tropical rubber tree.

Both natural rubber and the synthetic rubber used in the manufacture of Indelval rubber flooring are free of PVC, plasticizers (phthalates), formaldehyde, heavy metals, asbestos and halogens (i.e. Chlorine). The sustainability of our floor coverings are enhanced by the use of eco-compatible color pigments and mineral fillers from natural sources.

The manufacturing process of many Indelval rubber flooring includes recycled material content from pre- and post-consumer sources in to the benefit of a better environment.

Indelval rubber flooring's extremely long lifecycle and ease of maintenance not only offer a better cost/benefit relation but also result in low consumption of environmental resources. Our floorcoverings, due to their longlife and durability, don't have to be replaced often. Ease of maintenance reduces water consumption as well.

Indelval has ISO 14001 certification for environmental management system and ISO 9001 for quality system. These certifications are subject to regular independent auditing.

Prestigious independent institutions (i.e. IRAM, INTI, IQNet, USGBC and Green Certified MAS) and several technical tests support our environmental activities.

At Indelval social and environmental responsibilities are supported by actions and attitudes beyond words.

characteristics OF INDELVAL RUBBER FLOORING

Performance

- Extreme durability.
- Outstanding wear resistance.
- Extremely long lifecycle compared to other resilient flooring.
- Antistatic.
- High resistance to chemicals.
- Dimensionally stable. No joint sealing is necessary.
- A wide range of designs, colors and finishes.

Maintenance Advantages

- Economical and easy to clean.
- Extremely dense surface.
- No need to apply acrylic coatings.
- Reduce water consumption and improves the cost/benefit relation of the installed flooring.

Comfort and safety

- Anti slip properties.
- Walking comfort: flexibility and permanent resilience.
- Resistant to cigarette burns. No damage on the surface. Nicotine stains can be easily removed.
- Free of PVC, plasticizers (phthalates), halogens (i.e. chlorine), formaldehyde and heavy metals.
- Free of asbestos.
- In case of fire, do not generate hydrogen chloride, dioxins, furans and cyanide derives, which are very hazardous for people and equipment.
- High sound absorption when walking.
- Extremely dense surface preventing the growth of mites and bacterias.
- No emissions of hazardous substances that may damage people's health. Low emission of volatile organic compounds (VOC) according to the standard CA Section 01350.

Environmental compatibility

- Manufacturing processes eco-compatible – does not generate toxic agents during the production (gas, solids or liquids).
- Includes high recycled content from post-consumer and pre-consumer sources.
- Packaged with recycled materials.
- Eco-compatible raw materials: natural rubber is a rapidly renewable source.
- Use of eco-compatible color pigments and mineral fillers from natural sources.
- Natural and synthetic rubbers used in the manufacturing of Indelval rubber flooring are free of PVC, plasticizers (phthalates), formaldehyde, heavy metals, asbestos, halogens (i.e. chlorine).

For special applications

- Electrostatic conductive for ESD control.
- Extremely resistant to impact.
- Interlocked loose-laying tile,
- Raised access floors solutions.
- Indoor sports floorings for multipurpose use.
- Visually impaired assistance.

MRI | El Cruce Hospital | B.A. | ARGENTINA

economic performance

TANGIBLE BENEFITS DURING INSTALLATION AND USE

ECONOMIC EFFICIENCY DURING USE

- Extremely long lifecycle.
- Extremely good wear resistance.
- High footfall sound absorption.
- Dimensionally stable. No joint sealing is necessary.
- Efficient cleaning due to the exclusive high pressure system, in rolls and tiles, that results in an extremely dense surface not requiring the application of acrylic coatings.

ECONOMIC EFFICIENCY DURING INSTALLATION

- Easy installation: commonly used tools and materials.
- Weights and nominal dimensions easy to handle.
- Technical support service: back up during all the stages of the project (planning, subfloor preparation, installation and cleaning and maintenance), including installation training courses.

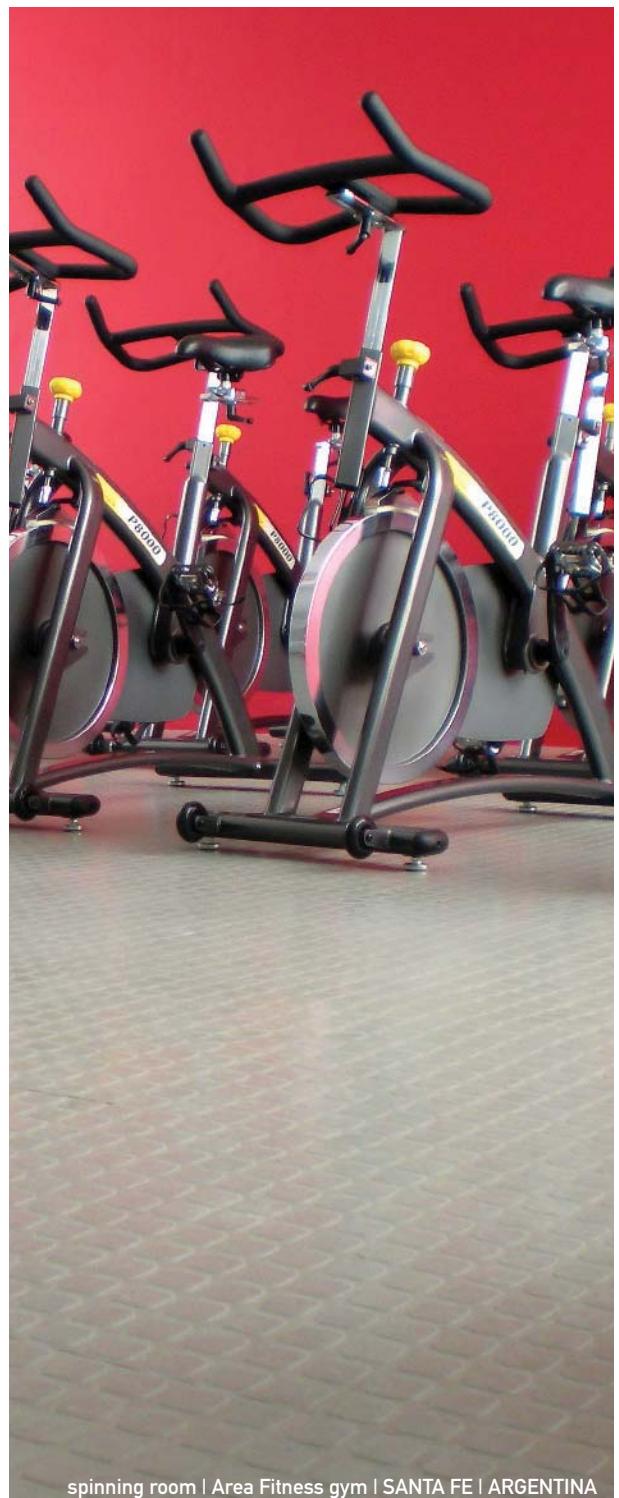

For more information | www.indelval.com

Indelval's great experience and the top quality of our rubber floorings become tangible economic advantages during installation and use.

design

LIMITS BEYOND IMAGINATION.

Combination possibilities are almost infinite. Indelval rubber floorings offer a wide range of standard colors, modern and attractive designs together with specially designed surfaces to fulfill the highest demands.

- More than 120 standard colors.
- More than 8 types of surfaces.
- More than 1000 possible combinations.
- Technical solutions with harmonious designs.

welding rods

Indelval rubber flooring matching welding rods are available.

Diameter 4 mm | Rolls 100 m

IMPORTANT NOTE: Indelval rubber flooring products do not need to be sealed because they do not contain volatile plasticizers which may cause dimensional stability problems after installation. However, joint sealing could be recommended for decorative purposes or in areas with special requirements, such as laboratories, operating theaters, rooms with intense wet cleaning or others areas with special hygienic requirements.

		Commercial	34	32	34	34
		Industrial	43	41	43	43
Additional properties						
Toxicity of fire gases	NFX 70-100		CIT < 20			
Anti-slip properties	DIN 51130		R9	R9 R10: textura	R9 R10: textura	R9
Effect of chemicals	EN 423		Resistant *			
Effect of castor chair	EN 425		Suitable **			
Thermal conductivity	ISO 8302		-	-	-	-
			Suitable for underfloor heating. Max 27 °C			
Impact noise reduction	ISO 140-8		10 dB	8 dB	8 dB	8 dB
Additional electrical properties						
Electrical propensity when walked upon	EN 1815		<2 kv, antistatic			
Electrical insulation properties	IEC 60093		>10 ¹⁰ Ohm			

* Depending on concentration and time of exposure. Additional information is available on request.

** Castor wheel type W (EN 12529). Shore A ≤ 90

Color variations due to different production batches as well as technical alterations to improve the product have to be accepted.

Indelval reserves the right to change product characteristics at any time.
